

## Program Management

**Integrated Systems Solutions (ISS)** manages programs for complex scientific and technical federal operations. We offer a full complement of program management services to ensure the best fit for each customer engagement. We integrate our certified quality and service delivery systems, customers experience and industry best practices and domain-specific expertise to ensure delivery of effective program and project management.

Effective planning is critical to the success of every project and program -- done well it produces new insights and understanding for stakeholders, sponsors, and owners. ISS employs our extensive program management experience to advise on the right planning approach for each program.

### Planning

ISS employs program and project management best practices and delivers planning expertise through our people, processes and technology to advise on and execute the right planning approach for your program and organization.

### Governance

Applying our highly-versatile governance framework to factor-in cultural bias, workforce capabilities and infrastructure limitations into the design and execution of effective and sustainable governance solutions for complex scientific and technical programs.

### Monitoring and Control

Promoting a culture of risk management by providing methods, tools, and training to monitor and control program and project risk. Our systematic approach addresses risk early-on and continuously to deliver consistent and predictable program results.
